# Chikungunya virus particle release inhibited by cellular receptors

Lipids can play a role in multiple steps of the viral replication cycle. Chikungunya virus can use phospholipid receptors to infect cells. The objective of this study is to understand the role of these cellular receptors in the exit of viruses from infected cells.

I would like to thank Dr. Melinda Brindley, current and past members of the Brindley lab. The research reported in this presentation was supported by the National Institute of Allergy and Infectious Diseases of the National Institute of Health under award number R01AI139238. This material is based upon work supported by the National Science Foundation Graduate Research Fellowship Program under Grant No. 1842396. Any opinions, findings, and conclusions or recommendations expressed in this material are those of the author(s) and do not necessarily reflect the views of the National Science Foundation.
